

The International Committee of the Red Cross has pleasure in acknowledging receipt of the reception report on its last trial broadcasts, which you kindly sent to Geneva.

Your co-operation on this occasion has been very useful, and enables the ICRC to enter precise information on its records of audibility and propagation over the wave-length used by it for these broadcasts.

The International Committee of the Red Cross trusts that it may continue to depend in the future upon your valuable co-operation, for which it is most grateful.

Georges Kuhne,
Broadcasting Section,
International Committee
of the Red Cross.

The International Committee of the Red Cross started making broadcasts as soon as the war was over, as an instrument in its search for missing persons, and for sending news of prisoners to their families.

In view of the humanitarian task's assigned to the International Committee of the Red Cross under the Geneva Conventions, the International Telecommunications Union Conferences held at Atlantic City in 1947, and Mexico City in 1948, allotted it a specific wave-length, for use should the need arise.

This wave-length (m. 41.6' - 7210 Kcl) is tested each year, in order to check propagation and audibility.

The ICRC is very pleased, on these occasions, to have the co-operation of all those who are interested in its work.

**INTERNATIONAL COMMITTEE
of the RED CROSS
GENEVA**
