SHORTWAVE CENTER

Edward G. Shaw
NASWA - WD4AE0V
621 Burleigh Avenue
Norfolk, Va. 23505 USA

IT WAS BOUND TO HAPPEN SOONER OR LATER !
by Ed Shaw, Editor

And it did... During the month of November, I will be uprooting my family to travel west again to the state of California. Military commitments will see me settle somewhere in the San Diego area again until the 12th of April 1976. Since there is not as much deadline limit for material used in Short Wave Center, I am able to do many articles well in advance. I don't anticipate any problems in completing sections through the December issue of FRENEX. However, I urgently solicit the cooperation of all NASWA members to submit material for this section - as well as for all the other sections of FRENEX. I would like to have a file of material completed for use in the early months of 1975 as I anticipate that I will have to relinquish editorship of Short Wave Center. The relieving editor's task would be made much easier if he had a ready source of material to work with. Please... let's have those station feature articles, your stories of DX experiences, equipment reviews, QRP submissions, just anything. And, illustrations are especially appreciated. 3x4 inches is good. We are looking for experienced volunteers who can assist in preparation of Short Wave Center - there is plenty of talent in NASWA. Primary qualifications are having a good typewriter, and an ability to devote your time, but most important, the DESIRE to do the job, month after unending month. The Short Wave Center address for me will remain valid until late October, so mail everything not later than the 21st of October to ensure I get it by the time I move. Those desiring to contact me after I move can reach me at my temporary address of 507 Lafayette Avenue, Lexington, Ky. 40502.

The Inside Story on Broadcasting in China - by Dan Jamison, Editor. To be presented in two-parts, continued next month.

A LOOP ANTENNA FOR LO FREQS Condensed from ARRL Ant. Bk

A loop can be helpful at times in rejecting unwanted signals. Loop is 20 feet insulated No. 18 stranded wire on a frame or board to form loops 12 to 20 inches diameter, and mounted so it can be pivoted both horizontally and vertically for best results. C-1 is 150 mmfd variable capacitor. Once hooked to your rx ant and grnd connections, the tuning capacitor is adjusted for best results and the loop frame rotated.

USEFUL
FOR
3-7.5
MHZ

Due to preparation for moving my household and office, I will not be able to continue offering the tape of interval signals offered in the July 74 FRENEX. Editor

PRIZES PRIZES PRIZES PRIZES ! !

The Short Wave Center will award some worthwhile prizes during the next few weeks for the judged best entries in the following areas of needed support:

1. Cartoons. Must be black and white. Source must be credited if not original. Must have an appeal related to our hobby.
2. Illustrations. Also black and white. Other than cartoons. On the order of those found on Pg 5, July FRENEX, or charts of interest, schematics, etc.
3. Humorous story with DX appeal, or technical article, or station feature (preferably with illus.)
4. Miscellaneous. Try your luck!! Who knows, you might win a prize.

All entries desired about 3 1/2 x 4 1/2, but not strictly insisted. All entries must be postmarked n.l.t. 20 Oct 74.

SOME CAVEATS ABOUT MECHANICAL AND AUDIO FILTERS

Final Part III in a Series

by Harry Helms

If one can honestly consider electronic gear as having charisma, then audio and mechanical filters certainly have it! These devices have captured the imagination of many DXers who desire better selectivity. But in many cases these devices are far from the miracles desired by the purchasing DXer, and in fact may be wastes of his money.

Let's look at mechanical filters first. These operate in the i.f. section of the receiver, and are based upon the principle of converting electrical energy to mechanical energy and back to electrical energy again. The energy conversion is accomplished by input and output transducers, and the selectivity is supplied by a mechanically resonant filter section composed of metal discs connected by thin rods. Each mechanical filter has the transducers and the metal disc filter section. The main advantage of a good mechanical filter is that the shape factor can very closely approach the 1:1 ideal mentioned last month. Tuning a receiver with a good mechanical filter is quite an experience.

Signals literally "pop" in and out as the receiver is tuned. There is very little of the gradual build-up and decline of signals one finds on most other receivers. As one tunes the dial, there is silence, and then - - zap!, there it is... and the tune-out is equally abrupt. The signal just disappears! Adjacent channel selectivity and "splash" reduction is remarkable. Carefully note that these performance characteristics apply to good mechanical filters. A good filter often will have as many as seven or eight metal discs in the mechanically-resonant section. The mechanical filters that one sees advertised as being included in receivers such as the DX-160 and HA600A have only two discs. The SX-190 receiver has two of these filters in cascade which will give better performance. However, the characteristics of these filters are nowhere near the better mechanical filters such as the Collins illustrated above. If the DXer thinks that he will have premium selectivity from an inexpensive receiver equipped with a mechanical filter, he is wrong! This is not to imply that receivers mentioned do not have adequate selectivity for many, if not most, DXing purposes. However, one is simply not going to get a 2:1 shape factor from these units! Saying that a receiver has a mechanical filter is a bit like saying one has a car in his garage - - - what kind of car? A Mercedes-Benz or a Rambler?

One often hears of modifying receivers to include mechanical filters. Popular Electronics magazine carried a "How to do it" article on this several years ago, and the National Radio Club has reprints available on how to install such filters in the Hammarlund HQ-180 receiver. Sources for mechanical filters have dwindled to hard-to-find status. Generally, they are still available, but quality units such as the Collins are expensive. Is the effort to modify a receiver with mechanical filters worth the trouble? Certain receivers, such as the better quality Hammarlunds, benefit greatly from the change. But, it must be remembered that mechanical filters introduce a great deal of gain loss, and the receiver must be sensitive enough to compensate or one will have to install an external source of amplification before the filter. Also, the old analogy about putting a racing engine in a model T chassis must be remembered. If the receiver is inadequate to begin with on several counts (sensitivity, stability, cross modulation, overload, etc.), then addition of a mechanical filter may only compound a bad situation. Finally, the physical work of installation is not an easy or casual task.

There are several other ways of adding selectivity to a receiver, such as addition of a Q-multiplier or the old "Q-5er" method, both often quite effective. The ARRL Radio Amateur's Handbook has details on these methods.

(Continued from preceding page)

Audio Filters are devices attached to the output of a receiver's audio section and work by rejecting audio frequencies above and below a certain range. The selectivity figures one sees for these devices are in terms of audio, not radio, frequency bandwidths. Thus, 30 Hz selectivity with an audio filter refers to a 30 Hz range of audio frequencies centered around a single frequency, say 800 Hz. In this example, the filter attenuates all audio frequencies not in the range of 770-830 Hz.

Audio filters are primarily designed for CW and they do not perform well when used for voice communications. A CW signal is one beat note, say 800 Hz, and thus it is possible to design a filter of relatively narrow bandwidth centered around that relatively high audio frequency that can give good results on CW. On the other hand, the human voice embraces quite a broader range of frequencies than the single CW beat note. Most voice communications systems use a range of approximately 200 to 2500 Hz. We can afford to sacrifice the higher audio frequency ranges and retain intelligibility. The audio ranges we want are about 200-400 Hz, well below the 800 Hz or so associated with CW filters. Use

of a high center frequency audio filter may help some on phone, but it will not be nearly as effective as a filter centered on a lower frequency of say, 250 or 300 Hz. A good audio filter can reject static crashes, CW signals of a different beat tone, and "custom tailor" the audio to your personal hearing characteristics. They also have other purposes...for example, the audio from a receiver with a good crystal or mechanical filter is often muffled or bassy. A good audio filter that has selectable center frequencies can be set to a higher center frequency, and thereby act as a high pass filter and restore a degree of "naturalness" to the audio. (Ed. note - again remember that unless adequate sensitivity or external amplification is available to the receiver, there will always some loss in gain referred to as 'insertion loss' when filters are added on.)

The past two years have brought forth a bewildering variety of audio filters. The important thing to remember is to check on the center frequency on any unit before buying. If the center frequency is relatively high, such as 700 Hz or more, chances are that AM performance will be less than desired. Some audio filters do have variable center frequencies, such as the one described on page 272 of the 1973 ARRL Handbook, and these should be of wider use to the DXer. Several NASWA members are experimenting with various filters, and perhaps they will report on their findings.

This series has had one overriding theme - miracles are seldom found. While it is possible to improve selectivity inexpensively by use of Q-multipliers or other devices, if you want real performance, you usually have to pay real money or invest real effort. It's an old and sad story, but true. -30- Reproduction not authorized without express written permission of the author.

CONSUMER'S REPORT EVALUATES PORTABLES

by Henry Rockwood

Readers might be interested to know that Consumer's Report magazine has been carrying analyses of multi-band portable radios for the past two issues. Thus far, the listings have been limited to the low cost "picnic" type receivers. However, I feel that forthcoming issues may review some of the top line radios. Unfortunately, more attention is given to the "action" public-service bands rather than the short wave bands. By their own admission, Consumer's Union admits they were not interested in testing multi-band portables which did not include the public-service bands. They warned that portables tested were fun receivers - not for serious monitoring. Perhaps a few letters to the magazine might encourage them to take on an occasional big-time portable, or even a communications rig.

ABC NEWS PERSPECTIVE: RFE
by Russell Jones via Ernie Behr

A continued article from
last month's bulletin.

.....Which brings us to the question of why the communists think it necessary to interfere with any radio transmissions from abroad....

The best answer to that may be Radio Liberty's pledge to provide an alternative to the official Soviet radio, a version of events other than that put out by the Kremlin's propagandists. An indication of how successful Radio Liberty has been and why the Soviets jam its broadcasts may be found in a statement by Alexander Solzhenitsyn a couple of years ago. Anyone in Russia, the author said, who wants to know what's going on in Russia must listen to Radio Liberty. RFE has much the same target. Its position is that people in Hungary, Czechoslovakia, Poland, Bulgaria and Romania do not have normal access to unbiased information about their own countries, and this is what it tries to provide. Both stations try to report the news of their target countries as they would if they were within those countries. BBC, VOA and Deutsche Welle have a different approach and a wider focus. They are all official foreign voices and to varying degrees voices of foreign governments, and thus not so concerned with purely domestic affairs of the target countries. My guess would be that a Soviet would listen to Radio Liberty or a Hungarian to RFE if there was a major happening in his own country. If the big news came from the Middle East, say, or the U.S., he'd turn to BBC, VOA or Deutsche Welle.

How successful these stations are in reaching their audiences may be argued. The communists of course say no right thinking person bothers to listen, but if that's the case why the strenuous effort to jam the broadcasts? Using various means to determine audiences...letters from listeners, travelers, the occasional visitor to the West...Radio Liberty thinks that perhaps 60 percent of the people in the Soviet Union listen at least occasionally to its programs. RFE puts its regular audience at about 50 percent of the potential. On occasion, those figures fluctuate in a way that tends to support the broadcasters' argument that they are providing a service that wouldn't be needed if the target countries had complete and objective news-casts of their own. For example, RFE's audience in Czechoslovakia dropped off sharply during the political thaw of 1968 when the liberal government of Alexander Dubcek loosened the ties on the radio, press and television. After the Soviets invaded Czechoslovakia and clamped down again, the number of listeners to RFE climbed dramatically. Despite the constant barrage aimed at them by the communists, both RFE and Radio Liberty have established reputations for accuracy and objectivity. RFE weathered its most serious storm in 1956 when western critics joined the communists in charging it had fomented the Hungarian revolution. But a West German government investigation ruled the charges unfounded and gave it a reasonably clean bill of health. Both the Munich-based operations went through another crisis several years ago when the story finally came out that they were financed by the CIA. I say "finally came out" because any reporter worth his salt who ever came near their transmitters had to know there was some kind of secret funding...they're just too big and too well equipped for any informed person to believe the cover story they were supported by public donations. The CIA, of course, was the obvious answer. RFE and Radio Liberty seem to have survived the scandal, and they are now run on funds overtly appropriated by the U.S. congress. Senator Fulbright, the communists, and the British government budget cutters, of course, are not the only people who think it's unnecessary to spend large sums of money to broadcast to the Soviet Union and the rest of Eastern Europe. A great many other intelligent, but I think unthinking, people just don't see any useful purpose in the effort. But, at the risk of boring you with repetition, I think that, well-meaning as the western critics may be, they overlook the fact that the peoples of eastern Europe just do not have real access to factual, objective information about their own countries-- let alone the rest of the world--except through broadcasts from abroad. The picture, of course, is not totally black, but rather varying shades of gray. In some of the hotels of Warsaw and Budapest, for example, foreign newspapers can be had. But of course those hotels are patronized almost exclusively for foreign tourists. No ordinary citizen of the Communist countries can subscribe to the London Times, say, or the International Herald Tribune. So you may ask, what makes it our business? Well, I think the answer to that is that there is a general agreement that we're living in a pretty dangerous world. About the only way to avoid disaster is to have the free-est flow of information, and for that, I think, we need those radio stations broadcasting to the Soviet Union and its allies.

By Russell Jones, ABC News

THE INSIDE STORY .. BROADCASTING IN CHINA

By Dan Jamison

Both government and private radio broadcasting stations were set up in China's major political and commercial centers in the 1920's. China's first radio station was set up in Shanghai in 1927 by the Sun Company to transmit market reports, news, and music. By 1928, there were 82 registered stations, 33 of which were in Shanghai and 20 of which were owned and operated by the government. Most of the stations were low powered and could not reach listeners beyond a certain radius of the city. The government's Central Broadcasting Administration station in Nanking was one which was heard internationally though.

In the 1920's and 1930's, the prime broadcasting target area was the city. But with the outbreak of the Sino-Japanese War in 1937, broadcasting efforts were expanded to cover the rural communities in the Chinese - Nationalist controlled areas. The war with Japan lasted from 1937 to 1945. During that time, the Japanese captured and occupied a large chunk of China's coastal area and drove the Chinese Nationalist government inland. Chungking, in Szechwan Province, became to war time capital and also became the communications center for the Nationalists. Government operated radio stations and other communications facilities operated from here and also in other inland cities which had no radio stations before the war.

Generalissimo Chiang Kai-shek, then the Chairman of the Military Council, made the first broadcast from the government's station in Nanking, radio station XKM, on August 1, 1928. XKM, by the way, was the forerunner of the Broadcasting Corporation of China network. On the first day of operations, XKM stayed on the air for four and a half hours using its 500 watt medium wave transmitter. In November, 1928, the call sign - XKM, was changed to XGZ.

In October, 1932, the famous station, XGOA, or the Central Station, started broadcasting its nationwide transmission with a 75,000 watt transmitter. Programming was also expanded from a 4 1/2 hour a day pure talk program to a ten hour a day schedule. Then they started offering musical programs, news, educational materials, weather forecasts, and market quotations. In 1936, the Central Broadcasting Administration (CBA) was created to bring all stations under some sort of unified control.

The Central Station, XGOA, moved to Chungking with the Chinese government, as mentioned earlier, in 1938 when the war against Japan entered its second year. From Chungking in 1939, XGOA beamed its 35000 watt shortwave transmitter to North America, Europe, and South East Asia. During the war years, the Chungking transmitters worked out of mountain caves which proved to be natural air-raid shelters against the Japanese bombers. The Japanese bombers were never able to knock out the XGOA transmitters. The stations carried on throughout the eight year war without interrupting their broadcasting for a single day. Meanwhile, they served as the most reliable source of information on the war on the Asian front. The London Times called them "The Mouthpiece of Free China".

BROADCAST TO EAST ASIA & THE SOUTH SEAS 对东亚及南洋播送

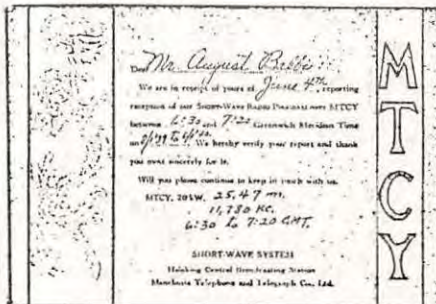

Letterhead from the 1943 schedule from XGOY.
This is also from August Balbi's collection from the past.

People in the Japanese occupied areas risked their lives by secretly tuning in the CBA stations for news, instructions, and entertainment. The government used the CBA stations to transmit instructions to underground agents in these Japanese controlled areas. Radio station XGOA transmitted orders to government personnel sent to the occupied areas as well as it also gave instructions to the civilians in the area. XGOA was the station which transmitted instructions from the Chinese government to the Japanese military commanders concerning preparations for the Chinese takeover when the Japanese surrendered in 1945.

BEGINNINGS OF CHINESE COMMUNIST BROADCASTING

It is not known exactly when the Chinese Communists first made use of shortwave broadcasting for propaganda purposes. Indications seem to narrow the period down till about the late 1930's or early 1940's. It is known that by 1943, a station was operating from the northern China communist stronghold in the mountain city of Yanan, Shensi Province, which is located approximately 400 miles southwest of Peking. This station beamed

The Manchuria Telephone and -
Telegraph Co issued this QSL
to August Balbi for his 1940
report of their station,
MTCY, located in Hsinking,
Manchuria.

anti-Japanese propaganda to troops scattered on the mainland of China. The station also had broadcasts intended to reach Japanese audiences on the Japanese home islands. The effectiveness of these broadcasts is not known to me, but it would seem that, taking in consideration the spirit of the Japanese people, these broadcasts - based on a scale from 1-10; would rate about negative 3. Nonetheless, due to technical problems, the station was forced to cease operations in late 1943.

After the war ended in August, 1945, the Chinese Communists launched a massive propaganda campaign directed towards the millions of people in the

rural areas of China. Radio broadcasting was a vital organ in the propaganda campaign of winning the minds and bodies of the people to one side or another. Billboards and handbills were also an important instrument in accomplishing the task of patrioting the people.

It is suggested that Chinese Communist (ChiCom) radio broadcasting was renewed in September, 1945, when the Yenam New China Broadcasting Station was established. Then Yenam station was moved to northern Shensi Province in March 1947, after the Nationalists captured Yenam from the Communists. Subsequent military action put the ChiCom's on the offensive. Throughout the civil war years, 1945-1949, more and more Nationalists broadcasting facilities fell into ChiCom hands. By the end of 1948, there were 16 broadcasting stations in Communist hands. By the time the Communists gained control of China in 1949, the number of radio stations in ChiCom hands amounted to 49. This included the original station at Yenam plus stations captured from the Japanese in World War II and also from the Nationalist Chinese.

The communist government then began to build up its broadcasting facilities. Privately owned stations were absorbed. Some stations were closed down; others were put under joint government-private ownership. Also new stations were installed at strategic points. Additionally, wired broadcasting, also known as "rediffusion", was added to the broadcasting system.

These radio stations were then jointly reorganized into a single broadcasting system known as the Central People's Broadcasting Station (CPBS). The headquarters and key station is in Peking.

ORGANIZATION AND PURPOSE OF CHINESE BROADCASTING

After the communist takeover of China in 1949, radio broadcasting came under the control of the Broadcasting Affairs Administrative Bureau (BAAB). The BAAB was responsible for school programs which were carried over radio and TV. The BAAB, in this light, is associated with the Ministry of Culture and Education for the production of the educational programs. Furthermore, the BAAB is responsive to the Department of Propaganda of the Party Central Committee. But it is the BAAB which, as mentioned earlier, controls the powerful radio transmitters. This includes Radio - Peking. As you all know from listening to Radio Peking, many of the international broadcasts are in Chinese as well as in a number of other languages. "The purpose of the broadcasts appears to be both to inform expatriates and to guide propagandists stationed abroad in carrying out their assigned missions". Radio Peking's recently stated objectives have also been defined as "to spread the Marxism, Leninism, and thoughts of Mao Tse-tung".

RADIO BROADCASTING IN CHINA

In 1970, there were 1021 radio broadcasting transmitters in China. This breaks down to 713 medium wave, one FM, and 307 shortwave stations or transmitters.

Every province and autonomous region has separate radio stations. These stations operate either on medium wave or on shortwave; or on both. They have no call signs but rather are designated either a CPBS station, a People's Liberation Army (PLA) station, a China News Broadcasting Station, or so on. It was reported in 1970 that stations were located in over 160 cities throughout the nation. The majority of the stations are concentrated in or around Peking. Here, the headquarters of the CPBS is located as well as 480 medium wave and shortwave transmitters plus China's only FM station. Additionally, the headquarters houses network control facilities and studios for program production.

The national network originates from the headquarters and is broadcast over four medium wave stations for listeners in the Peking area. Also, 19 shortwave transmitters send the national network programs - the home service, to many parts of China for rebroadcast. All other medium wave transmitters in the Peking area are grouped into four stations, or networks for local operation. The single FM station located in Peking is operated by the Ministry of Culture and Education and transmits educational programs for local listeners. Speaking of FM stations, it might be mentioned that there have been unconfirmed reports of a second FM station operating from Shanghai.

The four networks mentioned above may be classified as being either Home Service Program I, Home Service Program II, Home Service Program III, or Home Service Program IV.

Program I is intended for the general public. A few years ago, this program used to be filled with heavy propaganda. About one fifth of the program was news. The current slant and content of programming is unknown. The first program is now often carried by regional stations though.

Program II, a few years ago, was educational and contained a larger proportion of musical selections than did Program I. But here too, the main emphasis was the news. Dictation speed news is given in Program II primarily for recording and reproduction by other stations in the broadcasting system. The current slant and content of programming in this service is also unknown. Program II is sometimes relayed by regional stations now.

Program III devotes only a small fraction of its broadcasting time to the news. Program content in this service is light compared to the first two, consisting of music and operas. Again, the current status of this program is unknown.

The Capital Service has sometimes been called the fourth program. This is the service which broadcasts to listeners in the Peking area - as mentioned above.

Two year old information lists the Radio Peking Home Service Program I as using eleven transmitters, probably of 120 KW each, on fifteen different frequencies. You might tune

4460	6225	9064	11330	15550
4905	7095	9080	11925	15590
5320	7504	11290	15230	17605 ... to listen to HS I.

The Radio Peking Home Service Program II is aired over six 120 KW xmtrs. Give

4250	7190	10260	15030 ... a listen.
5075	7770	11505	
6345	9020	11730	

RADIO PEKING

China's international radio service is beamed to her neighbors and all parts of the world, as we know, over Radio Peking. Sixty two stations in the Peking area alone beam this service in 33 languages and five Chinese dialects, as of 1970, totaling over 1500 broadcasting hours a week.

Many of Radio Peking's transmitters were designed and built by the Russians and installed when Peking and Moscow were experiencing better relations. Many of the Soviet transmitters have a power output of 240 kilowatts each. Chinese manufactured transmitters are capable of putting out in the neighborhood of 120-250 kw's plus. Equipment from various Western manufactures is also used.

In 1950, 90 transmitters were broadcasting on long waves, medium wave, and shortwave and carried the Home Services and the International Service - Radio Peking.

Veteran DXer Al Niblack recalls that in 1951 ... the time when China was a real DX catch, the 35 KW Chungking outlet on 15170 KHz. was the most regularly reported Chinese station in North America. Al also indicated that Nanking worked on 5985 KHz. with 7 KW's and on 9730 KHz with 5 KW's. Harbin was on 7100 KHz. and pumped out a full kilowatt. Peking used its 1 KW transmitter on 6095 and its 10 KW's on 7500, 9040, 10260, and 15060 KHz.

This is what Al Niblack's 1952 vintage QSL from Radio Peking looks like.

TO BE CONTINUED NEXT MONTH IN FRENCH

LISTENER'S

SURVEY RESULTS SPOTLIGHT, PART XI

Credits to the Spotlight this month go to Al - Miller, OH, and Chuck - Rippel, VA.

Dan Jamison
310 Roanoke Street
Apartment 21
Richmond, VA 23225

DEADLINE: 15th

* **CAPE VERDE ISLANDS** These islands, owned by Portugal, are located in the Atlantic Ocean on the 15th parallel about 500 miles off the West coast of Africa. The islands boast of three shortwave stations, Radio Clube de Cabo Verde located in the town of Praia on Santiago Island, and Radio Barlavento and Radio Clube Mindelo located on the island of Sao Vicente. The first two stations are regularly heard in the 75 meter band; Radio Clube Cabo - Verde on 3883 KHz and Radio Barlavento on 3930. The best time to log either station is in the 1900-2400 time slot. The 75 meter band is loaded with hams so you will have to fight your way through. Both are good verifiers and seem to accept English reports. (many thanks Al; Al Miller, OH)

* **NIGER** Once part of French West Africa only twenty years ago, Niger comparatively has prospered under independence gained in 1960. Population is sparse with only five people per square mile and most of the country is desert. Just lately, Niger has suffered under the weight of drought that has crippled that region. Because of having to serve a large area, ORTN (Office de Radiodiffusion-Tellevision du Niger) uses several medium wave transmitters as well as five shortwave transmitters on 3260, 5020, 7155, 9575, and 9705; all with 4 KW except 9705 KHz which has 30 KW. The 90 meter band and 60 m.b. outlets can be heard on good African periods of reception at 0530 sign on time. The 60 meter outlet is the easier to hear of the two. Then check the 90 meter frequency for parallel operation. On weekends, one has to wait until 0700 to be able to hear ORTN. This time the freq is 9705; the lower frequencies are closed down on weekends. (Thanks for the article Chuck ... Chuck Ripple, VA)

* **SYRIA** The Syrian Arab Republic on 9655 KHz can be a difficult catch. They have an English program scheduled from 2030 to 2200, but this freq has been a favorite resting place for DW, Radio Moscow, and other more powerful transmitters at various times throughout the year. About the only thing to do is tune 9655 during the English period every time there is an opportunity and trust to luck! Their QSL policy is very erratic. A report sent July 31, 1971, was verified February 8, 1973, while a report of Jan.-1, 1973 was verified May 3, 1973. (real fine Al ... Al Miller, OH)

AND NOW, ON TO THIS MONTH'S LISTINGS.

AFGHANISTAN R. Afghanistan says they now require 1 IRC if a verile is wanted for a reception report. (CHARLIE WOOTTEN, MD)

ALBANIA Rumen Pankov notes that R. Kukesi broadcasts in Albanian on the new freq of 6584 fm 1600-1900. (via Charlie Wootten, MD)

ASCENSION ISLAND The VOA now has a new xmtr there beaming to LA fm 0930-1100 on 15195 1130-1400 on 15350 0930-1400 on 17830. Another VOA station to work for your awards certificate gang! (C. Wootten)

ANTIGUA Arthur Cushen says that DW and the BBC are to build a relay base on this island in the West Indies. Both will build two xmtrs of 250 KW each but the opening date is now known. (Charlie Wootten, MD)

AUSTRALIA Radio Australia directs its programs to NA as follows: 1115-1245 on 7295, 9580 & 0100-0300 on 11970, 15320, and 17795 (by way of Philip Wala, WI, Al Miller, OH, Charlie Wootten, MD)

BELGIUM BRT via Mark Brown, OH, Richard Wood, NY, Char. Wootten, MD, and direct fm BRT:

ENGLISH / ANGLAIS / ENGELS

GHANA The North American
svc of Radio Ghana is on
11850 at 2000-2100.
(Charlie Wootten, MD)

HONDURAS The following are domestic svc's, as traced by the BECMS:

Radio Progreso	El Progreso	4920	1100-0500	
Radio Lux	Olanchito	4890	1200-0300	
Radio Suyapa	San Pedro	6125	1100-0630	(by permission, BECMS)
La Voz del Junco	Santa Babara	6075	1100-0100	

INDONESIA Craig Tyson, Australia, has traced the following RRI stations:

2420	RRI Bandung	ID'ing at 1227
3528	RKPKD Pasuruan	at 2220
3895	RPDK Sidoardjo	2145 with Moslem vocals
3925	RRI Bogor	signing on at 2200 w/full ID; then Jakarta nx
3945	RRI Ternate	pos ex-3916 to avoid BBC on 3915, S/on 2056

INDONESIA In DSWCI, Bob Padula and Craig Tyson, both Australian gents, rpt RRI Yogyakarta has this new sked: on 2350 (1 KW) and 7110 (50 KW) fm
- 2200-0230 (Su 0800), 0400-08; 10-1700
7100 (7 1/2 KW) 0300-0330 (not Sun)
5047 (20KW) 0100-0230 100-1700

RRI Jember on new 3324 at 1200 replacing 3315

RRI FAK-Fak w/lts 200 watt xmtr on 3391, replacing 3345, at 1300

RRI Manokwari back on 6185 fm s/on 0757 to 1000.

RRI Bukittinggi on 4885 s/on at 2258, and again at 1100. (via C.Wootten)

EGYPT Radio Cairo has French to Canada in its winter sked on 9455 which replaces 11630 at 0100-0145. (Dr. Richard Wood, NY)

INTERNATIONAL WATERS The Dutch Marine Offense Act went into effect on Aug. 31, 1974, so Radio Nordsee International and Radio Veronica are forced to comply. RNI will stop b/c'ing in Dutch and will leave on Oct 1 to sail to the Mediterranean, b/c'ing on 6210 on the way. The Mebo II will anchor off Genoa on Oct 15 and b/c in Italian on MW, and have a world svc in English on shortwave. (very interesting Bruce...Bruce Boomer, WV/GA)

ITALY English to NA fm RAI is now at 0100-0120 on 6010 and 9575. (Philip Wala, WI)

LAOS "Heard Vientiane, Laos, on Aug 2, 1974, and decided to send another rpt, after yrs of trying. BINGO! answered by air mail letter in 3 wks w/ confirmation statement, didn't state date or time. Letter in French, translated by a friend, indicates interest in reports. Stated sked is fm 2300-0230 (Sun 0300) & 0500-1430 (Sat 1500) on 6130. Pwr is still 25 KW. Address is ROYAUME DU LAOS, Ministere de l'Information, Direction de la - Radiodiffusion Nationale Lao, Boite Postale N. 310, Vientiane - LAOS. Verie signer: Mr. Khammoune Sananikone (Controleur Technique Generale) (outstanding Jim! Jim Young, CA)

MALAGASY REP R Nederland started a new relay xmsm Sept 1, for the benefit of Western Europe and especially England. Relay is fm Tananarive. Check out 11730 fm 2000-2120. It is the same pgm received at 2130-2250 also on 11730; but this time, fm Lopik, Holland. (Gladys Keeler & S Rogacki)

MEXICO An old friend is back! says Al Miller, OH, Radio Tricolor, XERH, in Mexico City showed up on 11880 and 15110. Sometimes they run in //, but they also run 11880 at 1400-1800 and 15110 at 2200-0200. But then too, both stations run fm 1100-0800 at times. There seems to be some variance in the sked, so if you don't hear them when you tune the first time - try again. The signal is almost like a local.
(Al Miller, OH, and Dr. Richard Wood, NY)

MONGOLIA Mike Willis of Australia mapped out the following sked of Radio Ulan Bator over an eight week period. Here is what he observed:
Mongolian Home Svc:

0900-0930	on	7260	
0900-1210		6383	
1400-1420		4762,	5053 (pos 7260)
1315-1400		4762,	5053
0930-1000		7260	
1300-1330		7235,	7260
1330-1400		7235,	7260
1220-1252		17785	(anything on 8890 Mike? ed)

Relay of Moscow's Mongolian Svc:

External Svc's:

Chinese
Mongolian
English

(An excellent job Mike!!)

SARAWAK Kuching noted on new 6060 signing on at 1200 in Malay // 4835. 6050 and 5005 are // to 4895. (Mike Willis, AUSTRALIA)

SINGAPORE Radio Singapore has the following transmissions:

TURKEY *** TURKISH RADIO SURVEY ***

Jim Van Zorge, NY, has researched the Turkish situation on both medium wave and shortwave. Since FRENDX is SWBC only, we will present Jim's fine study starting with the REGIONAL STATIONS ON SHORTWAVE.

POLICE RADIO STATIONS

6325 Istanbul Police Radio 0900-1000; 1400-1500

6340 Ankara Police Radio - 1 KW 0557-1100; 1158-1600; 1700-1900

METEOROLOGY STATIONS

6900 Ankara Meteorology Radio - 2 1/2 KW 0500-0700; 0800-1000; 1200-1600
1800-1930

6965 Bandirma Meteorological Institute Radio - 2 1/2 KW 0600-0630; 1630-1700
It is known that these Met. stations operate sporadically throughout the year, and therefore may be silent during certain months.

HIGH SCHOOL RADIO STATIONS

7014 Balikesir Lisesi Radyosu - 100 watts

7050 Aydin Lisesi Radyosu - 50 watts

7140 Turhal Lisesi Radyosu - 0800-1000

7150 Zile Lisesi Radyosu Su: 0800-1000; 1200-1400; Wed-Sat 1200-1400
other days, 1300-1430

7200 Tokat Gz Osmanpaca Lisesi Radyosu 0700-0845; 1200-1400

7317 Ayvalik Lisesi Radyosu around 1200

These high school stations are known to be experimental and operate on very low powers. Therefore, reception of these stations outside of Turkey is very rare, but were listed for the sake of completeness.

ARMY STATIONS

7235 Ankara Army Communications School Training Radio ... this is the only known active army station - sked not known.

TECH. UNIV./SCHOOL STATIONS

6280 Tech Univ of Istanbul - 1 KW 1800-2030

6440 Ankara Tech School Radio - 450 watts

7100 Cinarli Sanat Enstitusu Deneme Radyosu (TA06) - 250 watts
0800-1000; 1300-1500

7108 Ankara Elektronik Sanat Enstitusu Radyosu - 250 watts sked unkn.

7143 Technical School of Istanbul (TA05) - 1.6 KW Weekdays-1800-2000
Sun 1100-1300

7280 Istanbul U. Radio - 1.75 KW 1200-1400

CONTINUED TOP OF NEXT PAGE

Turkish Radio Survey - continued

TRT AFFILIATED SHORTWAVE STATION

7650 Hakkari - 1 KW 0355-0800; 0955-1200; 1355-2100

RECEPTION REPORTS

All reception rpts should include return postage (mint stamps) and a SASE along with a clearly understandable rpt in elementary English.

ACKNOWLEDGEMENTSBBC Monitoring Svc for their update of LW and MW stations.
(outstanding Jim) Jim Van Zorge, NY)

UNITED STATES OF AMERICA The VOA relays BBC LA svc in SS at 0315-close at 0415 via Delano on 11880. This represents a remarkable change in communications policy in the US and comes on the heels of the inauguration this spring of the relay of BBC Italian svc via VOA - Munich on MW. Of course, BBC has operated the VOA relay at Wooferton, England, for many years. (Dr. Richard Wood, NY)Richard; this may be a trade off for the VOA's use of the BBC's Ascension Island relay (p. LN-1) - ed.

USSR See p LN-4, FRENDX, September edition; the Russian Transmitter Sites-Verified article. Please take Yuzhno-Sakhlank and Ulan Ude off the list of unverified and add to Asiatic Russia verified. Change totals to 59 RR sites verified and 17 Asiatic. (Al Sizer, CT)

USSR - RADIO MOSCOW TO NORTH AMERICA FM FAR EAST SITES Bill Davis, CA, our resident Soviet DX'pert did it again. He, as in the past, has charted the times and frequencies of various Soviet Far East xmtr's and programs.

(thanks for sharing your hard work w/us Bill)

ETC. The emergent nation of Guinea Bissau has just ordered four 500 KW shortwave xmtr's fm Brown Bovel. The state of CABINDA (this territory has a \$500,000,000 a year oil revenue) is ordering seven 250 KW shortwave xmtr's. (George Schnabel, NY)

ETC. - PART II Have you ever heard of a book put out by the Foreign - Broadcast Information Svc (a part of our federal gov't) entitled "Broadcasting Stations Of The World"? Volume II lists stations operating on all shortwave frequencies. Also station ID's are listed for many of the stations. The price is just \$2.75. The order number is TREX-7.972/pt 2. The address to send your checks is: Superintendent of Documents, - Government Printing Office, Washington, D.C. 20402. (Charlie Wootten, MD)

ATTENTION:

In the spirit of WDXFY 73
A Special Edition of the

CLUB ONDES COURTES DE
RADIO-CANADA
SHORT WAVE CLUB

Dedicated to the

World DX
handicapped aid campaign

The Radio Canada Shortwave Club will have a special pgm on November 2 & 3 devoted to the WDXHAC & HAP. All reception rpts for this pgm only will be QSL'd by this specially designed card. Be sure to tune in!

(via Ian McFarland, Producer, RCSWC)

Just enuff space left to say THANKS! to all of our contributors for their vly valuable and necessary support. Hope to hear fm YOU next month!

73 & Happy Listening!

CLANDESTINE BULLETIN

Larry Magne, 15 Central Avenue, Philadelphia PA 19111 USA, Tel. 215-379-2574

REPORT ON CYPRUS

by
Offer Barth, Israel

Israeli DXer Offer Barth, in a letter dated August 25, gives a roundup of Cypriot radio activity as monitored by him from Haifa.

Voice of Cyprus, 674 kHz, Anamur, Turkey: It appears to not be 5 kw, but, rather, 20 kw. Unfortunately, it shares the channel with IBA Ramalla (200 kw), making reception difficult in Israel.

Radio Bayrak, 1095 & 1473 kHz, Nicosia, Cyprus: Received well still in Israel on both channels, which have nonparallel programming as before.

Sancak Radio, 1275 kHz, Lefka, Cyprus: Not received now or in the past: Offer feels it may no longer be broadcasting.

Voice of Paphos Veterans, 1522 kHz, Paphos, Cyprus: Was received until about 25 July, then gone, apparently no longer active. Offer suggests it may have been destroyed in battle.

Voice of the Falcon, 1200 kHz, Larnaca, Cyprus: Never received in Israel, no information.

Canbulat Radio, 1372 kHz, Famagusta, Cyprus: Not received since June, apparently closed down due to the recent conflict.

That is some real unusual DXing, Offer -- thanks! Offer also points out that the pro-Barzani "Voice of Kurdistan of Iraq" is now received heavily jammed on 1200v and sometimes 1206v since late July or thereabouts. The jamming, which ought to ring a bell among veteran DXers, is of the overmodulated Western "pop" music variety... sort of a Middle-Eastern version of the Soviet "Mayak" jamming. Offer finds this effective, for the clandestine station is now "difficult to receive". Presumably the schedule is still roughly 1700-2030 (the last 1/4 hour in English) on 1200/1206v, 1440v, 1550v, 3605v & 6936v.

RADIO NORDSEE UNDERGOES TRANSFORMATION

Information from Grezg Calkin and John Campbell indicates that Radio Nordsee, which, like the other remaining pirates, had to shut down operations from September 1 due to a new Dutch anti-pirate law which went into effect then, is undergoing a transformation into an Italian pirate called Radio Nova Internazionale. It plans to broadcast on 1610 MW (110 kw) -- the channel almost used by U.S. pirate "Radio Free America" -- plus 6210 and a channel in the 31 MB. This should start being heard about the end of September.

John, writing in Numero Uno, suggests writing RNI at the following address: A.J. Beirens, Room 207, Doverlaan 7, B-8380 Zeebrugge, Belgium.

One major international broadcaster is contemplating putting a powerful transmitter on 6210 kHz shortly for programs beamed to Europe; perhaps for that reason RNI appears to be testing, as heard in Philadelphia on September 15, on 6205 rather than the old 6210. Of course, 6205 was used some time back by RNI, which later adjusted to 6210 to avoid Tirana QRM from 6200.

REPORT FROM BULGARIA

by
Stefan Kirilov

Our new reporter, Stefan Kirilov, reports from Sofia that Radio Independent Spain and Radio Free Portugal appear to be broadcasting from two different centers, rather than one

as had been previously assumed. Interesting enough, this ties in with an observation made by another CB contributor, M. Liniars-Ondes, to the effect that while in Romania he found clues suggesting that there may be two sites for these operations.

Stefan indicates only the 1235-1255 and 2005-2025 weekday broadcasts are via Radio Sofia's facilities, the rest are from two centers in Romania, as follows:

• Center 1: 1200-1315 (ex-1300-1415) RFS, 0600-0655 RFS, 0700-0730 RFF, 1600-2312 RIS and 2320-2350 RFF.

• Center 2: 1200-1230 RFF and 1900-1955 RFF.

Stefan does not indicate the exact sites, but reliable Western monitoring sources have variously suggested Cluj and Bucharest as the sites. So...why not both?

Finally, Stefan lets us in on a little non-clandestine news item too late to get to Listener's Notebook: Radio Sofia is constructing 2x500 kw shortwave transmitters at a site near Plovdiv; these will come into operation later this year with Foreign Service programs beamed to Africa, Asia and Latin America. We are, Stefan says, "the first" to know of this development.

LAOS -- CLANDESTINES

From LTC Henry Durant via WRTH, further via the DSWCI, we have a new list of Laotian stations that are considered "legitimate". The list includes such as United Lao Races, heretofore considered quasi-clandestine; hence, we will publish the list in full so that the clandestines and non-clandestines will fall into their correct slots, so to speak.

• Radiodiffusion Nationale Lao: Vientiane: 640 & 6130 kHz 2300-0230, 0500-1500; 1030 kHz 0500-1500.

Luang Prabang: 580 & 705 kHz 2300-0200, 0400-0700, 1100-1500.

Pakse: 1370 kHz 0400-0700, 0800-1430.

Other: 1180 kHz (0.5 kw) & 1400 kHz (1 kw) for local service.

• Psychological Warfare Division Stations: Headquarters, Lao National Armed Forces, Vientiane:

• Voice of the National Army, Vientiane: 750 kHz, 20 kw, 2245-1500

• Voice of Psywar, Vientiane: 980 & 5306 kHz, 0.2/0.3 kw: 2300-0400, 0700-1500

• Voice of the Signal Corps, Vientiane: 1100 & 7066 kHz, 0.2/0.3 kw, 2300-1700

• Military Regional Stations operated by Psywar Services:

• Military Region I -- Luang Prabang: 1240 kHz 0200-0430; 6510 kHz 0700-0930

• Military Region III -- Savannakhet: 575 kHz, 20 kw, 0000-1400

• Military Region IV -- Pakse: 885 kHz, 20 kw, 2300-1400

• Military Region V -- Vientiane: 1410 & 6770 kHz, 0.2/0.3 kw, 0000-1500

• Autonomous Regional Stations (military sponsored):

• United Lao Races, Long Cheng: 950 & 4500 kHz, 5 kw, 2300-1030 (also operates at times on 7145, 7600 & 6660 kHz)

• 2nd Strike Division (Xieng Lao Santisouk), Seno, Savannakhet Province: 4625, 6250 & 7385 kHz, 5 kw, 2330-0230, 0530-0830, 1130-1300

• Military Region III Psywar commercial station: 1430 kHz, 25 kw, 0000-0430, 0730-1400

• Lao National Police Radio, Vientiane: 550 kHz 2300-1430, but inactive since August 20, 1973.

The source further indicates an unidentified clandestine station, "believed mobile in Vientiane", and maybe competing with VoA's Thailand-based Laotian broadcasts, is noted on 1600 kHz 1030-1100 & 1200-1500.

Experience suggests a station such as this would not successfully operate for long or with appreciable radiated power via mobile facilities.

Of course, the nature of the conflict in Laos makes CIA support of some or all of the above stations not unlikely; however, the mere presence of covert funding does not render a station clandestine (if this were the case, even Taiwan's "Voice of Free China" would have to be considered clandestine).

The BBC NS indicated earlier this year that the "Voice of Peaceful Laos" operated from 0500-1500 (now reported as 1400) and 2300-0200 on 840 & 7384 kHz (cf. 2nd Strike Division, above).

AFRICA

With Portuguese decolonialization in full swing, clandestine radio events are making some expected changes. Among them:

• Not noted since September 1 or so is Radio Liberation ("Radio Libertacao"), before that date widely heard on, among other channels, 6240 kHz. Its location was near Conakry, but there is nothing to stop further broadcasts to the Cape Verde Islands, which were not liberated along with Guinea-Bissau.

On September 9, Nelo Repalla, 22 years old, arrived in Bissau from Conakry to "help take charge of the nation's radio station", according to The New York Times. That station was last listed on 1034 and 5045 kHz, although a regional station is also listed on 1070 kHz in the WRTH.

• In Mozambique, rebellious whites took over the facilities of RCM for a brief period characterized in the streets by bloodshed. The rebels finally called it quits and

RCM operated more or less legitimately until perhaps September 13th, roughly, when, says shepard monitor Serge Neumann, RCM vanished from the 90 MB.

Serge has found RCM a reliable DX-level catch in the Midwest evenings, so those interested in the happenings in that country may be able to follow some of it on their shortwave sets. Our thanks to Serge and Myron Reamy for this material.

PIRATES OF THE WORLD, UNITE!

While Western pirates were under a Joe Ritsflk cloud of gloom following the Dutch government's decision to ban them from the airwaves, their amateur counterparts in the Soviet Union, used to such limitations, have sprung up like mushrooms in a cemetery on a rainy day.

Rumen Pankov, writing in RADX's "Bandspread", states that 14 pirates were on the air in Moscow in one night alone! They operate in the 1600-1700 kHz (U.S. "bootleg band") and 290-410 kHz ranges. "Radio Crocodile" is often heard in the evening on 1625 kHz in Kerierovo, and four new hobby pirates (bootleggers) have been heard in Kerierovo, Siberia. Rumen indicates the stations use tx's of 250-750 watts strength to do their forbidden thing.

SCOTTISH FREEDOMS COMPETE

by
John Campbell

It seems there are now two Scottish stations, each claiming to be the true "Radio Freedom". The schism in the management may be because one lot (6220 kHz, regularly from 0830 Sundays; Free Radio Enterprises, 15 Springfield Place, Roslin, Midlothian, Scotland) wants to play only pops, while the other (6263-90v, irregularly; SFRN, 17 Esk Grove Drive, Bilston, Midlothian) wants to talk about freedom struggles as well. Listeners should "be aware of imitations". (via Numero Uno)

VOICE OF THE THAI PEOPLE REPORTED REACTIVATED

by
Krisha Wasanasong

Our new reporter in Bangkok, Krisha Wasanasong, writes that various newspaper reports indicate the clandestine Chinese-based station, "Voice of the Thai People", was reactivated on or not long before August 7, 1974, after being pretty much off the air for two years.

He checked and found that, indeed, the station was operating loud and clear on 6035 & 9422.5, both, incidentally, very much in parallel. Part of the programming included male vocal music accompanied by typical Laotian instruments (khene and percussion) with what sounded like a typical Lao "wahlan", a method of spreading news in troubadour style from village to village (which preceded radio and newspapers in Laos and which is still in limited use).

Very interesting. I seem to recall that Voice of the Thai People has been loved by some DXers in the past two years, but maybe I'm wrong.

Jerusalem Post

The Cyprus conflict is recorded and transmitted to the outside world by Israel Radio's Michael Gordus, standing, and an unidentified translator. The radio team has been a major source of information on the hostilities for the entire world, recording and translating broadcasts from the island in Greek, Turkish and English. (Segal)

IEA's Michael Gordus monitors Cypriot stations (See Sept. CE-2)

QSL Report

Henry Rockwood
RD #6
Summerhill Addition
St. Clairsville, Ohio
43950

DEADLINE: 10th of month

Robert C. Wiles Co-Editor

- QSL NEWS -

As newly appointed editor of this section, I ask the members to "grin and bear it" for a couple of issues while I get the hang of this.

Bob Wiles, of Wheeling, WV. will be handling the typing chores. Thus I feel, he deserves equal billing as "CO-Editor"

The policy will be as follows:

1. Each contributor will be given as much credit as apace allows.
2. Illustrations are desired. Return will be made if S.A.S.E. is included.
3. If you have reason to believe your varification is for new stations, or is hard to get - please say.

I hope to get to know the members; and hope I can do at least half as well as Larry. We are all sorry to see Mr. Yamron relinquish his position, and wish him luck and 73's.

73's

Henry Rockwood

OCTOBER QSLs RECEIVED 1974

AUSTRIA: ORF., 6155, mountain card in 3 wks. (Wooten) 9770, full data card in 27 days. (Overcamp); card, sked, technical info in 35 days for 1 IRC (Rockwood), Card in 3 mo. (Edelson)
Schulidesoster, Bundessheeres, 6255, full dada card in 9 wks for 2 IRC'S (Wooten)

BELGIUM: ORU, 9655, full data card, mail bag script 6 wks Air; full data card (Brunner), mail bag script, 23 days air (Peraaha)

LOG REPORT

AS NOTED LAST MONTH, ALL REPORTS FOR THE LOG REPORT SHOULD HENCEFORTH BE SENT DIRECTLY TO THE INDIVIDUAL LOG REPORT EDITORS. Their addresses are noted below. Notice the change in deadline for the A portion of LR.

Beginning with the next issue of FRENEX, the A section of Log Report will be edited by Bob Hill. Bob has been around the DX scene for many years, and is experienced in editing, having edited a portion of the bulletin of the old Universal DX Club, as well as having been an editor for QST for a time. We welcome Bob to the FRENEX editorial staff, and look forward to his efforts on the Log Report A section... Because of his west coast location, the deadline for reports to reach him is being set at the 12 th of each month.

This month A section is edited by Dan Ferguson.

SECTION <u>A</u> (1605-6200 KHZ)	SECTION <u>B</u> (6201-11600 KHZ)	SECTION <u>C</u> (11601 KHZ up)
Bob Hill 2923 Florence St. # 304 BERKELEY, CA 94705 (Deadline: <u>12</u> th)	M. R. Leonhardt P.O. Box 13 Liberty, Indiana 47353 (Deadline: <u>15</u> th)	Jerry A. Lineback 411 South Fourth St. Joseph, Ill 61873 (Deadline: <u>15</u> th)

WHEN REPORTING TO LOG REPORT EDITORS....PLEASE list items in order by frequency in either direction, with the frequency at the left of the item; please follow essentially the same format used in LOG REPORT, and be sure to include your name at the end of each item, as reports are cut apart for editing. Also, please leave space between each item so that they will be easier to handle. Thank you.

The loggings this month include many very good catches, but nothing definite on Antarctica.

- 2200h GUATEMALA R.Superior, stn I 1st logged 11/6/71, and last logged 2/17/74 w/0500 s/off, finally appears in an official list via WRTH LA-News: It is TGSR, at Coatepeque, 1100 KHZ. Hrd again 9/7 at 0545, weak SS, 0600 TG-- and slogan IDs; poor. (Hauser)
- * 2360 GUATEMALA R.Maya de Barillas, 1101 M w/fqs(2360/3325), then mx px, good lvl for 250 watts(Spot)
- 2390 MEXICO R.Huayacocotla, 1130 SS, definite IDs by M w/many mentions of Mexico; good lvl 9/7(Spot)
- 2428 PAPUA/NEW GUINEA R.New Ireland, 1112-1137 t/o, Pidgin, choral music, M talking, Tuchscherer)
- 2446 REUNION ORTF, *0230 FF nx headlines, cl mx, fading(Abraham, Boomer, Garrou)
- 2480h USA KADS, Elk City OK, 2 x 1240 is regular, 9/7 0050 ID, football(Hauser)
- 3020wh COLOMBIA R.Ambalá, Armero, Tolima, 3 x 1007v(nominal 1020); hrd 9/7 0047, IDs; noted to s/off 0356. Only SA harm noted this season in 2-3 MHz band(Hauser)
- 3100h GUATEMALA...Probably clearing up another harmonic UNID is new info via WRTH LA News. A "R. Modelo" ID hrd here 2/19/73 at 1100. New listing by this name appears in Retalhuleu; the stn I hrd was definitely in Guatemala; thus R.Modelo, TGRE, was likely operating on 1550, a fundamental of 3100. (Hauser)
- 3020h (out of order, sorry -DF) ARGENTINA R. El Valle, 0057 & 1035 in SS, mx, ads, TCs, several clear IDs; 9/6 & a few days later. 2 x 1510. (Boomer)
- * 3195 U UNID This stn in Arabic px, music, continues to be hrd 1630-1800, although weaker. (Robinson-Swaziland)
- 3204 NIGERIA NBC-Ibadan, 0430-0440 IS, EE ID 0432, into lcl mx, fair(Mayer)
- 3204 INDONESIA RRI-Bandung, M w/news 2303, clear IDs, strong(Robinson-Swaziland)
- 3210 MOZAMBIQUE LMR here at 0425 w/nice PP mx, good lvl(Henderson) Tentative: RCM suspected here 0410 w/PP tlk by M & MOR mx. Gone by 0445(Neumann) 0350 PP, real mx, then rooster crows 0400 & wake up mx, mx(A.Miller) 0430-0450 f/o, Short PP anmt, then mx(Earhart)
- 3212 U UNID Latin in SS w/mention of Quito; 0420-0440, gong 0430, ID lost in noise. (Mayer - 9/6)
- 3215 U UNID Logged this one 6 nites straight. Nonstop Greek mx, along w/some Arab mx. 2 times have hrd OM speak what I believe was Greek. Sig fair at 2230 f/i, strong by 2300(no anmt at hour or half hour). Seems this one usually runs sig equal to SABC on 3250. One nite listened 2245-0310 & only two short anmts hrd, both at 20 min past hour. My guess is Cyprus, Greece, or Turkey. (Abraham)0055-0130 t/o, chants & ME mx, VG lvl, no anmts(Tuchscherer) 3216, 0410-0430* Greek mx, NA at 0436, off 0438. Perhaps the Dominican.(Mayer)
- 3225 VENEZUELA R.Occidente, SS to 0502*, weak but in clear for a change(Neumann) This is probably the UNID reported in SS sports 0500 poor by(Abraham), and at 0415 in SS by(A.Miller)

- 3232 MALAGASY RTV Malagasy, 9/7 w/best signal of the year around 0330 w/FF talks, African music, FF ID 0330; fair(Henderson)
- 3240 PERU Presumed R. America, Andean vocals 0315, exc lvl(Dexter) Assume R. America though no ID heard; 0520 poor w/Andean music(Abraham)
- 3245 VENEZUELA R.Libertador, 0340-0401* SS talks by M&W, national anthem(Tuchscherer)
- 3250 S.AFRICA SABC, 0100-0430 English, pops, etc(Wala, Wootton, Courtney, Miller)
- 3260 ECUADOR LV del Rio Carrizal, full ID, and anthem, then open carrier at 0300+ s/off on 8/31. Fair lvl, heavy QRN, and the UNID LA not noted after s/off. (Dexter)
- 3260 PAPUA/NEW GUINEA R. Madang, 1200 local singers, very poor(Lineback)
- 3275 VENEZUELA R. Mara, 0310-0330+ SS, LA music, US music(Tuchscherer)
- 3285 S.AFRICA SABC, 0400+, EE tlks(Tuchscherer) 0420 excellent signals(Henderson)
- 3290 GUYANA Action Radio, GBS, guitar IS 0755, *0813 w/rel px, Hindi mx later(Cox)0912 Hindi mx, ID 0915 in EE & Hindi(?), Hindi mx(Earhart) 0920 EE, TC, ID("GBS", light music(Jones)0241-0340* EE rock oldies, few anats(Boomer)..The tentative AIR I reported in August LR is probably this. Hrd 0845 w/ EE M w/request program, Indian stringed music(Keating)
- 3295 BRAZIL R.Educ.Rural, Camp Grande, appears to broadcast only 6 days a week, as never hrd on Sundays. LT is GMT-4, per TCs from the station(Tony Jones-Paraguay)
- 3300 GUATEMALA TGNC, 0412-0430* EE rel px(Lineback, A.Miller)1130 SS rel px(Jones)
- 3300 UNID on 3300 in SS, under TGNC, poor sig after TGNC left 0358 9/2. UNID had sports px of some kind. SS pops 0430. Sounds like UNID has compressed modulation; not tunable on SSB. Could be R. Trujillo, Venezuela on drift from nominal 3295 KHz. (Neumann)
- 3315 ECUADOR R. Pastaza, 0310-0324* abruptly, LA & lite mx(Tuchscherer) MOR mx to 0431* w/complete ID; fair lvl(Neumann)
- 3315 BRAZIL do not know which; fair signal 2330 w/M in PP & Brazilian mx(Abraham)
- 3316 SIERRA LEONE R.Sierra Leone, 2300 lcl songs & EE ID(Henderson)0615 comm and pop mx(Garrou) Is comm an abbreviation for commercial, or for commentary? Because of the possible double interpretation, ad is better for commercial, and entry is better for commentary. Or, possibly com'l for commercial. DF ...0625 local lang, music. (Earhart)
- 3320 S.AFRICA SABC, 0411 Afrikaans, M&W talking(Lineback)0427 EE ID, Afk tlk(Tuchscherer)
- 3322 BOGAINVILLE IS RB, 1113-1130 Pidgin, ID, EE ID, lcl & C&W mx, good(Lineback) 1035, EE ID, EE px to at least 1100, island & C&W music; fair(Robins)
- 3325 VENEZUELA R.Monagas, *0900(Earhart) *0914(Jones) *0945*(Tuchscherer)
- 3325 BRAZIL R.Borborema, 2340 Brazilian mx, M in PP(Abraham)
- 3330 RWANDA Tentative NF for Kigali, rel px in FF, mx 2000-2005, mx(Robinson-Swaziland)
- 3331 COMORO IS R. Moroni thought to be stn here 9/2 w/african chants at *0330 with fair signal under CHU(Henderson)
- 3339 TANZANIA R. Tanzania Zansibar, 0304 Koran chants, followed by YL w/news(Garrou)
- 3340 HAITI 4VSP, 0015, EE rel px to 0030, SS to 0100, then FF, 9/5(Garrou)
- 3345 BRAZIL R. Alvorada, 0110-0135 PP, lite mx, ID 0130(Tuchscherer) Tentative, 1010-1020 tlk & mx under static, no ID readable(Earhart)
- 3346 ZAMBIA R.Zambia, EE tlk 9/6, 0442, (Henderson)0420-0456 EE(Aother?), pop & Afr music, tlk px, no ID hrd, but assume Zambia(Boomer)
- 3350 GABON Presumed Franceville, 8/31 *0500, poor to fair, lost around 0510. Checked Sunday & Monday nites 0430-0500+ and nothing hrd. 9/3 excellent evening for Africa so wonder if this schedule is not daily(Dexter)
- 3360 PAPUA/NG R. Milne Bay, 1035-1050 t/o lang, lite mx(Tuchscherer) 1150-1200 Pidgin, talks, music; fair(Lineback)

- 6018 ???ANTARCTICA??? (from the October FLASHSHEET, edited by Al Niblack, 420 Shelby St., Vincennes, Ind. 47591. For details on receiving the FLASHSHEET, see the back cover of FRENDX)...On 9/15, 0610-0715a, hrd on 6018, a weak AFRTS Relay; at times down in the mud, then back up above the noise level with perfect clarity. The stn had no flutter fade, but just gradual in and out rise and fall above the prevailing noise lvl. A check of 6012 revealed no sign of a carrier of any kind. Just the usual AFRTS ID. If this isn't McHardo, then just who is it??? (Bill Sparks, California)...Also from the FLASHSHEET...Ed Shaw advises that reports may be mailed direct to: Officer in Charge, Antarctica AFRTS, c/o U.S.Navy Antarctica Support Force, FPO San Francisco, CA 96692. Mail being processed during the next few weeks.... All above from the NASWA FLASHSHEET.

CREDITS LR-B took a while to get here, so "B" section credits are added below, except those listed on the credit page. (DF)

William C. Alder, San Antonio, TX, Lauson Booker, Columbus, Ohio, DX150B, John Creamer, Denver, Colorado, SW4A, Kurt Cox, Kalamazoo, Mich, SK190, Bill Davis, Laguna Niguel, CA, Agnes Harbold, Lynwood, CA, SK190, Ed Martin, Providence, RI, XCR30, Mitch Rudman, Cherry Hill, NJ, George Schnabel, Rochester, NY, SW4, Bruce Veidt, Grimshaw, Alberta, SK190... Our thanks for your reports.

THE BARLOW WADLEY XCR30 Pursuant to the note last month regarding obtainability of the XCR30, Perry Ferrell informs that Gilfer Associates, Box 239, Park Ridge, NJ 07656, is the exclusive importer of the XCR30. It is available only from GILFER, at \$260, and that price includes duty charges. Perry further advises that the manuals are available in this country only from Gilfer Associates.

Member ad For sale, 30 issues of SPEEDX, July 1971 - Dec 1973, \$10. Assorted SWLing books \$8, all in excellent condition. Andy Pappas, 11421 S. Maplewood Ave., Chicago, Ill, 60655.

NOTICE Just a reminder that material for the Shortwave Center which you mail after October 21, 1974, should be sent to HDQ. This arrangement will hold until Ed Shaw is relocated to his new California address (which is, as yet, unknown).

ARTICLES on stations, technical subjects, etc., continue to be needed for the SHORTWAVE CENTER. Also needed are QSL illustrations for FRENEX.

EXPEDITIONS AND REPORTING Quite some time back Ed Shaw and I, and some others began using various devices to indicate loggings made while on DXpeditions. E.g., we used "MCDKA" (Mountain Creek DX Association) to designate loggings made at a farm on Mountain Creek, near Beckley, W. Va. ROM was used for loggings made at Red Oak Mountain in Virginia. These designations were used only in circumstances which were different from our normal receiving locations, and where items were generally jointly logged..... In normal receiving locations individual DXers should submit their own reports, and list their names after each item. There have been some cases recently where a group credit was used to cover loggings from a normal, usual receiving location, or from more than one location. We ask that, rather than a group credit, the individual who logged the item be credited - that will let other know who heard the station. Use the group credit for DXpeditions, please. Thanks.

Thanks to all who contributed this month. A special thanks for the compliments re LR that I received in many of your letters this month. I hope I can continue to serve you well. Please be sure to mail your letters early enough to reach the editors by the deadline date.

The solar-terrestrial condition predictions that I attempted were a little off because the monthly peaks in solar activity averaged 24 days for the past three cycles. The September peak occurred on the 13th and a minor geomagnetic storm occurred September 15-16 with auroral displays visible in Illinois at about 0400 on 16 September. Geomagnetic quiet existed September 8-14 at the same time as the solar activity was increasing with a solar flare reported on September 10. I would advise anyone seriously interested in solar-terrestrial conditions to keep a graph of the daily variations, as illustrated in SWC a couple of months ago, as it is easier to predict a few days in advance than it is to predict a month in advance as I attempted to do here. The next peak in solar activity may be about October 8. Geomagnetically disturbed conditions may occur September 26 and October 11 with quiet conditions October 5 and 16.

HEADQUARTERS NOTE

We are few pages shorter than usual this month. We should be back to regular size next month, with full sized QSL REPORT, and with the DX season in full swing we should have a rather extensive Log Report. Be sure to send your reports to the correct editors...Check the section for any recent changes before mailing your reports. Thanks.

Thanks, gentlemen. DF

We've had several inquiries about the possibility of NASWA designing and making available a club SWL card, and report forms (rather than the guides previously available and currently being revised) in Spanish, French and Portuguese, as well as English. We'd like to get some idea as to just how popular such would be. If you are interested and would order some if they were made available, drop a note to HDQ & let us know. Thanks.....Dan Ferguson

FIRST CLASS

NASWA's FLASHSHEET is compiled twice monthly and mailed separate from FRENEX. FLASHSHEET EDITOR is AL NIBLACK, 420 SHELBY STREET, VINCENNES, IND. 47591. All reports for FLASHSHEET go directly to Al, not to HDQ.

NASWA dues are US\$10 in North America. Overseas the dues are the same, but airmail is available overseas for the following additional charge: Central America and the Caribbean \$4; South America and Europe \$5; Asia & Pacific \$6.

The FLASHSHEET is available to members for US\$4 per year in North America. It is airmailed overseas to members who desire it for US\$8.

Checks/money orders for dues and/or the FLASHSHEET should be made payable to NASWA and should be sent to NASWA, BOX 8452, SOUTH CHARLESTON, WV 25303 USA
